

Billing Accuracy Standard

Aurora Retail Energy · v3.0 · Effective 15 May 2026

1 • Purpose

1.1 This standard governs bill accuracy, estimated reads, unbilled energy and re-billing.

Training on this document is mandatory for all customer-facing staff and is refreshed annually. Completion is recorded in the learning management system and reported to the compliance committee quarterly.

2 • Estimated reads

2.1 Estimates must use the customer's historical consumption where available and be clearly identified on the bill.

Where a customer cannot be reached after two attempts on their preferred channel, the account is referred to the specialist team for alternative contact before any further action is taken.

3 • Back-billing

3.1 Where a customer has been undercharged and the undercharging is not the customer's fault, recovery is limited to the 9 months preceding the date the error was identified.

3.2 Recovered amounts must be offered as an interest-free instalment plan matching the period of the undercharge.

Records generated under this section are retained for seven years and made available to the AER on request. Team leaders review a sample of screening outcomes each month as part of the quality framework.
